University Final Project

UniManage Framework

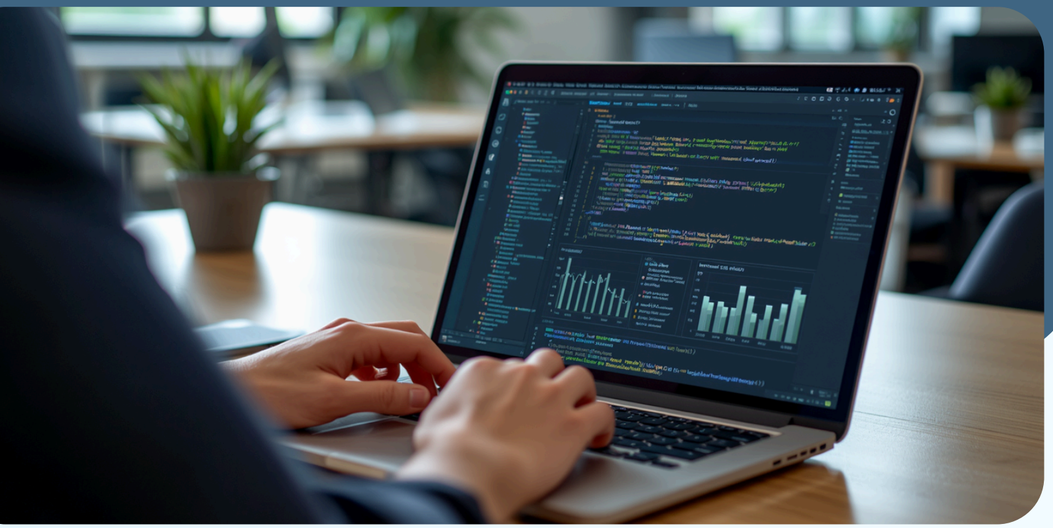

Sri Lanka AI Travel Assistant

A Smart Conversational Agent with Voice & Weather Integration

Sri Lanka AI Travel Assistant

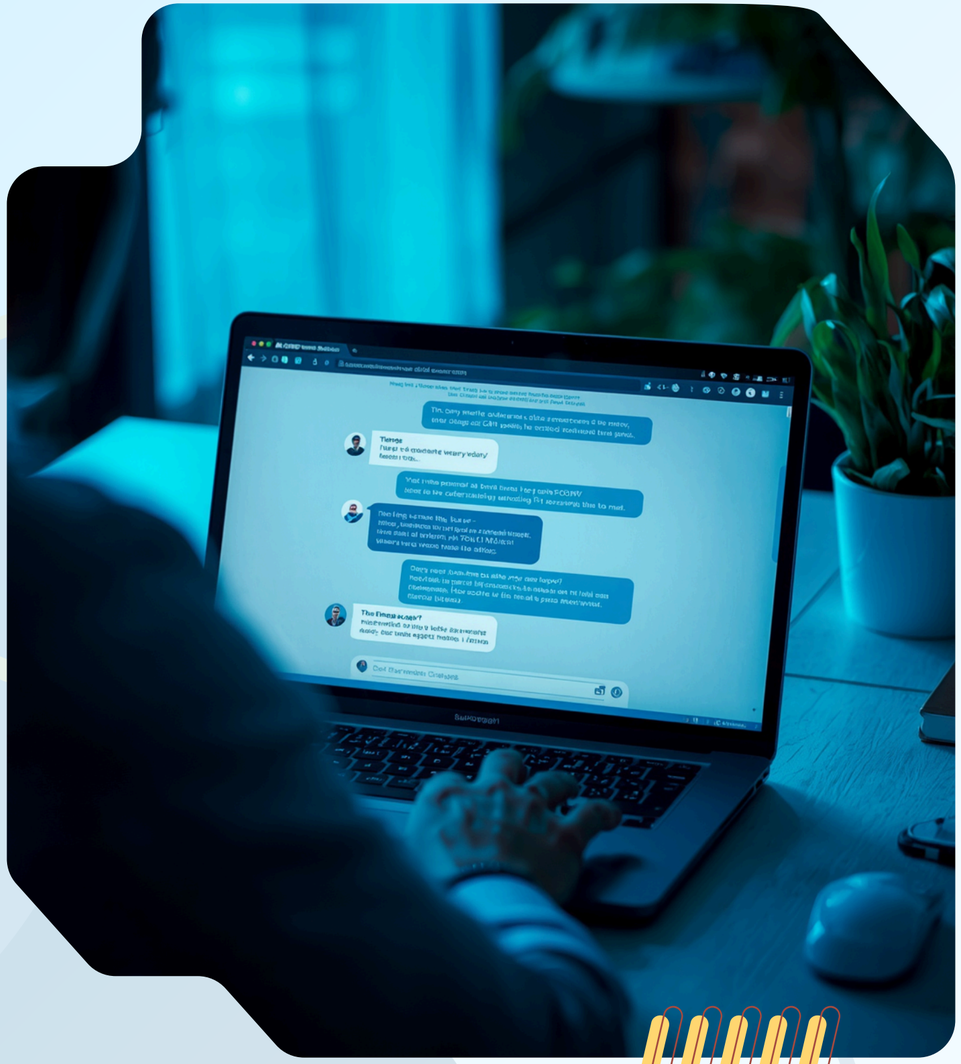

Project Overview & Architecture

Core Architecture & Tech Stack

Core Objective: Assist tourists with automated destination insights, live weather tracking & commercial packages.
Front-End: Streamlit (Python) — reactive UI/UX.
Back-End: SQLite — Destinations, Packages, Unknowns & Feedback tables.

Sri Lanka AI Travel Assistant

Conversational Intelligence & NLP Pipeline

Intent Recognition: Keyword & pattern matching for tourist queries. Entity Extraction: Detects destinations, dates & preferences. Response Engine: SQLite-driven dynamic reply generation. Fallback Logging: Unrecognized inputs auto-logged to Unknowns Table.
